39	AN OVERVIEW ON BLS PRODUCTS

1970

BLS starts its activity in Milan by setting up its first manufacturing plant, laboratories and offices. Initially, production was focused on disposable cup shaped respirator masks.

2006

In order to meet a rising global demand, BLS starts to invest on its own internal engineering team to design and develop fully automated production lines.

2003

BLS widens its offer starting to produce half masks and full face masks.

1996

CE marking is introduced. BLS is one of the first manufacturers to obtain such certification.

2005

BLS obtains the ISO 9001 certification.

2010

BLS completes its own offer of products by acquiring a facility in Spain, specialized in the manufacture of filters for reusable respirators. Thus **BLS Iberia** was born.

2012

BLS do Brasil launches a new office in Curitiba, in order to reach the South American market.

2014

BLS builds new headquarters in Milan extending over a 5000 sqm surface. They were built with the most modern technologies.

2020

BLS celebrates 50 years of Excellence

2017

The **BLS NorthWest** division in Rotterdam is inaugurated to serve the growing market of BeNeLux, the United Kingdom and Ireland closely.

2018

The BLS products are certified according to the new European Regulation EU 2016/425.

50 YEARS OF PRODUCTS, QUALITY AND EXPERTISE

— *strengths*

EXPERIENCE & MADE IN EUROPE

Operating in Milan since 1970, BLS is highly specialized in the production of negative pressure respiratory protection devices.

QUALITY & TEST LAB

BLS, thanks to sophisticated equipment, constantly monitors the quality of its products, from raw materials to the final product, respecting the requirements established by the new EU Regulation 2016/425.

ENGINEERING

BLS designs, develops and produces all products internally, taking care of the entire production process, from concept to shipment. Thanks to a high specialisation of the internal technical personnel, it also differs in the design and proprietary production of the machinery, thus being able to count on highly automated and controlled production lines.

PROTECTION & COMFORT

Our mission is to offer maximum protection without giving up on user's comfort.

— *thinking*

R&D DEPARTMENT

It constantly designs, develops and improves the entire product range. Moreover, for years, BLS has been collaborating with the Politecnico of Milan, through dedicated research contracts, for the study and development of innovative products and new business models.

CUSTOMER SERVICE

Responds to customer requests in a professional, precise and timely manner in 6 languages. BLS exports its products in over 60 countries.

— *making*

DISPOSABLE & REUSABLE DEVICES

The entire range of BLS products is the result of 50 years of field experience and includes all categories of respiratory protection devices, from disposable to reusable ones.

FILTERS

Strong investments in the automation of many time-wasting industrial processes and a special care on choosing the best raw materials make our facility in Barcelona, in which the BLS filters are produced, an innovation hub for the whole group.

CUSTOMIZED PRODUCTS

BLS, thanks to its own internally developed production lines, is able to customise and adapt its production to respond quickly and accurately to requests from special markets, such as medical and military, or from special customers, who require special customisation of the product.

EUR1

Thanks to completely European production, BLS has obtained the EUR1 certificate for its entire product range, both disposable and reusable.

**POLITECNICO
MILAN 1863**

SCHOOL OF DESIGN

Selection of students' projects developed during the Final Synthesis Laboratory. Academic Year 2019/2020.

BLS

OUR SERVICES

FIT TEST

Validation service through quantitative fit test of PPE for respiratory protection.

The quantitative fit test is used to evaluate the degree of compatibility between a specific protection device and the user's face. The test is carried out with a particle counter which allows to obtain the numerical value corresponding to the seal factor of the used PPE.

On request, a qualitative fit test service is also available.

TRAINING

The course responds to what is required in terms of training on the correct use of PPE for the protection of the respiratory tract. Classroom activity can be integrated with specific training through fit test done in "live" mode on each course participant.

At the end of the course a certificate of attendance will be issued for each participant.

MAINTENANCE

Training course on the maintenance of BLS full face masks.

The course provides complete training on the operations necessary for the revision, disassembly, the replacement and reassembly of the components. At the end of the course a certificate of attendance will be issued for each participant.

CONSULTING

Consultancy service to support customers in choosing the most suitable protection device based on the activity carried out and the contaminant with which they come into contact.

A further support, not to be used as the sole guide for the selection of protection devices, but also as a database of the main contaminants and relative protections required, is the new "BLS Genius" app.

PROTECTION FROM

DUSTS, MISTS AND FUMES

DUSTS are formed when a solid material is decomposed into tiny fragments.

MISTS are tiny droplets that are formed from liquid materials through condensation and atomization processes.

FUMES are formed when a solid material (e.g.: a metal) is vaporized through high temperature. The vapour cools quickly and condenses into extremely fine particles.

The term **PARTICULATE** commonly identifies the collection of these solid particles in the air.

There are two families of products for protection against particulates:

A) FILTERING FACEPIECES, indicated with “FFP”; EN 149 standard.

B) FILTERS (for half or full face masks), indicated with “P”; EN 143 standard.

In reference to the protection from particulates, the legislation confers an increased protection with the increase of the filtering efficiency:
FFP1, FFP2, FFP3 / P1, P2, P3

MINIMUM FILTERING EFFICIENCY

EN 149		EN 143	
FFP1	80%	P1	80%
FFP2	94%	P2	94%
FFP3	99%	P3	99,95%

CLASS OF PROTECTION

The European Standard EN 529:2005 shows how to select the correct breathing apparatus based on the risk assessment. This standard indicates the “protection factor” which is by definition the parameter that expresses the ratio between the concentration of the contaminant in the environment and its concentration inside the breathing apparatus. An important distinction concerns

the **nominal protection factor (NPF)** and the **assigned protection factor (APF)**. The nominal protection factor (**NPF**) is a number derived from the maximum percentage of total loss (towards the inside of the breathing apparatus) allowed by European standards. The assigned protection factor (**APF**) is the level of respiratory protection that one can realistically expect in the

workplace by 95% of the PPE users. Furthermore, an important reference for choosing the breathing apparatus is the **Threshold Limit Value (TLV)**, or rather the “exposure limit value”, which indicates the environmental concentrations of airborne chemicals below which most workers can remain repeatedly exposed to day after day for their working life without any negative effect on their health.

FILTERING FACEPIECES			HALF MASK WITH FILTERS			FULL FACE MASK WITH FILTERS		
CLASS	NPF	MAX CONC.	FILTER CLASS	NPF	MAX CONC.	FILTER CLASS	NPF	MAX CONC.
FFP1	4	4xTLV	P1	4	4xTLV	P1	5	5xTLV
FFP2	12	12xTLV	P2	12	12xTLV	P2	16	16xTLV
FFP3	50	50xTLV	P3	48	48xTLV	P3	1000	1000xTLV

If the concentration of the pollutant in the workplace is unknown, the first rule for selecting the minimum level of protection can be provided by the following table:

PROTECTION LEVEL	P1	P2	P3
POLLUTANT TLV / MINIMUM EFFICIENCY	≥ 10mg/m ³	0.1 < > 10mg/m ³	≤ 0.1mg/m ³

PROTECTION FROM

GASES AND VAPOURS

GASES are substances which at an ambient temperature and pressure are in a liquid or solid state and pass to a gaseous state through boiling or evaporation processes (e.g.: oxygen, nitrogen, carbon dioxide).

VAPOURS are substances which at ambient temperature and pressure become gaseous through evaporation from a liquid or a solid (e.g.: acetone, toluene, hexane). For protection against this type of contaminant it requires a carbon layer

filter suitably treated to selectively absorb different substances.

The European Standard 14387:2004+A1: 2008 defines protection against gases and vapours according to the following table:

TYPE	COLOUR	PROTECTION
A	BROWN	Organic gases and vapours with a boiling point higher than 65°C
B	GREY	Inorganic gases and vapours
E	YELLOW	Acid gases
K	GREEN	Ammonia and derivatives
AX	BROWN	Organic gases and vapours with a boiling point lower than 65°C

CLASS OF PROTECTION

To select the right protection against gases and vapours, the chemical nature of the pollutant must be known referring, if necessary, to the tables provided by BLS, which indicate the type of filter to use depending on the contaminant and its concentration, making sure that the level

of oxygen is greater than 17%. Regulations provide three filter capacity classes: low (class 1), medium (class 2), high (class 3). For protection against gases and vapours, the nominal protection factor is determined by the type of mask and not by the filter

used. Although the filtering efficiency of the filter is close to 100%, the duration of filter increases with increase of the capacity, since the quantity of carbon layer is larger. On the contrary, by increasing both the volume and the weight of the filter, the breathing effort increases.

CLASS	1	2	3
CAPACITY	LOW	MEDIUM	HIGH
EXPOSURE LIMIT	1000 ppm	5000 ppm	10000 ppm

	HALF MASK		FULL FACE MASK	
	NPF	MAX CONCENTRATION	NPF	MAX CONCENTRATION
GAS	50	50xTLV	2000	2000xTLV
GAS P3	48	48xTLV	1000	1000xTLV

COMBINED FILTERS

In the presence of both gases/vapours as well as particulates, protection with combined filters is required. These filters combine a gas filter with a dust filter. **BLS offers its customers a complete range of filters.**

SOME BASICS ON DISPOSABLE DEVICES

The duration of the product is for one or more work shifts. They can only protect from particles. There are three classes of devices divided according to filtering and holding efficiency (FFP1, FFP2, FFP3).

Features

Eolo
technology

EOLO VALVE

The Eolo technology of BLS valves drastically reduces breathing resistance and allows an air passage 30% higher than classic valves, concentrating it in two points of maximum opening.

ARMOR

It's an external layer that ensures the protection of the filtering material from dirt, dust and liquids extending and preserving filtering efficiency and making the device safer.

NOSE CLIP

Along with the face seal it secures the fit of the respirator to the most critical part of the face among users, the upper nose.

FACE SEAL

A foamy strip placed around the respirator is essential to guarantee maximum protection avoiding air flows passing through unsealed borders. It can be partial (sealing the upper nose) or complete.

Filtration principles

nano
filtration

MECHANICAL

If inhaled, nanoparticles (between 1 and 100 nanometers wide), can pass through cellular membranes reaching internal organs and potentially cause severe harm to the body being very difficult to dispose. Specific tests have helped us to develop a filtering medium able to successfully block the access of such substances. **With NANOFILTRATION, BLS can guarantee a new standard of protection against nanoparticles.**

ELECTROSTATIC

Smaller particles are subject to a further filtration by the electrostatically charged filtering material. Therefore, the smaller the particulate, the stronger is the electrostatic attraction.

nano
filtration

ACTIVATED CARBONS

A layer impregnated with activated carbons could be added to the filtering material enhancing the protection and comfort of the product in presence of nuisance odours.

DISPOSABLE PRODUCTS / CUP SHAPED FILTERING FACEPIECES

BLS ZERO SERIES

WATCH THE VIDEO 

01

ANATOMIC

The pre-formed cup and elastic support makes an easier and reliable fit, perfectly adapting to different physiognomies and ensuring an excellent hold.

It offers an excellent visual field and a great compatibility with glasses.

02

WELDED ELASTICS

The ultrasonic welded elastics, to eliminate the exposed metal parts, are made of hypoallergenic latex-free material.

03

AVAILABLE WITH ACTIVATED CARBONS

Activated carbons protect from acid and organic gases-vapours and ozone below the Threshold Limit Value (TLV), specific for every substance.

04

WELDED ELASTICS

Developed to eliminate all exposed metal parts.

05

TEXTILE ELASTICS

The disposable masks of the BLS classic series with activated carbons have resistant and performing textile elastics.

DISPOSABLE PRODUCTS

REUSABLE PRODUCTS

FILTERS

SOME BASICS ON REUSABLE DEVICES

In EN 136, full face masks are classified according to the type of application:

1. Light use (use with small capacity filters)
2. General use (para usos más pesados, tienen mayor resistencia a la inflamabilidad)
3. Special use (they offer greater resistance to radiant heat and flame. They can be used for firefighting) *

The filters differ according to the type of filtration:

1. Carbon filters for gases and vapours, which include 3 classes, each with different duration, weight and protection (low class 1, medium class 2, high class 3)
2. Dust filters, which provide 3 protection classes based on filtering efficiency (P1, P2, P3)
3. Combined filters (combination of the above)

* Source: EN 529:2005

Products

HALF MASKS

They protect the nose and mouth and can be used if protection for the eyes is not required or in combination with safety goggles. However, it is essential to analyse each risk and determine the correct protection needed.

FULL FACE MASKS

They protect the entire face and ensure a greater protection factor. They can be used in combination with supplied-air products or PAPR.

FILTERS

They are connected to the mask. They can protect from both particulates and gases and vapours, or from the combination of the two. The same filter can sometimes be used in both half or full face mask, depending on its features.

Filter types

PARTICLES

Particles filtration is ensured by means of a pleated medium. The pleating of the material ensures a higher filtering surface and reduces breathing fatigue.

GASES&VAPOURS

Gases and vapours are adsorbed by activated carbons grains. This material is characterized by a high porosity structure that traps gases and vapours in its surface. They can be treated to adsorb selectively one or more groups of specific substances.

COMBINED

Combined filters are built with two sections, the first one with a pleated medium for particles filtration, the second one with activated carbons, for gases and vapours protection.

FILTERS TECHNOLOGY FOR REUSABLE DEVICES

In addition to the universal connection (EN 148-1) BLS developed a simplified twin connection to meet the highest performances and security standards.

BAYONET CONNECTION

This connection is highly intuitive, allowing a quick and safe hold on the mask. It has a locking feedback allowing the user to know if the filter has been properly placed. The double filter offers better weight distribution on the mask and a wider field of vision.

UNIVERSAL CONNECTION EN 148-1

Standard thread connection according to EN 148-1, universal among all respiratory protection devices.

ACTIVATED CARBONS

The quality of the activated carbons used by BLS for the filtration of gases and vapours meets high standards of safety ensuring excellent filtration performances. They are produced without toxic additives such as Hexavalent Chromium (Cr VI) and they are food grade certified (REGVE231 / 2017).

BLS TECHNOLOGY FOR FULL FACE MASKS

LIVE VISOR

In BLS Series 5000 masks, the screen protection in optical class 1* (EN 166) allows a panoramic visual field without optical distortions. A vitrification treatment on its surface makes it scratch resistant.

* Eye protectors with no corrective effects are categorized in 3 classes depending on their spherical, astigmatic and prismatic optical imperfections (EN 166). Class 1 is the best quality class attainable.

VISOR
Optical class 1

VISOR
Lower optical class

K-OMFORT

The strap of the BLS 5000 series masks is fixed on 6 attachment points directly to the rigid frame so as not to deform the face seal. It allows to distribute the weight of the respirator evenly without leaving face marks.

ANTI-FOG

Designed to avoid visor fogging through the control of the cold and hot air flows inside the mask without perishable surface treatments.

05

VISOR

Optical class 1 (EN 166), allows a panoramic visual field without optical distortions. A vitrification treatment on its surface makes it scratch resistant.

06

HARNESS

Fixed on 6 points directly on the rigid body of the mask in order not to deform the face seal. It allows to distribute the weight of the respirator evenly without leaving face marks.

07

CLASS 3

The masks classified in class 3 offer greater resistance to radiant heat and flame. They can be used for firefighting.

BLS 3000 SERIES

Glass visor

Features

01

UNIVERSAL CONNECTION

Standard thread connection according to EN 148-1, universal among all respiratory protection devices.

02

ANTI-FOG

Designed to avoid visor fogging through the control of the cold and hot air flows inside the mask without perishable surface treatments.

03

GLASS VISOR

To guarantee maximum protection of use, the glass is composed of three layers of anti-fragmentation film and guarantees high resistance against chemical agents.

ACCESSORIES

C43

Washable bag
for half mask and filters.

C41

Washable bag with shoulder
belt for full face masks
and filters.

C22

Frame for prescription
lenses for full face mask
5000 series.

C23

Frame for prescription
lenses for full face mask
3000 series.

K15

Polycarbonate visor cover
for full face mask 5000 series.
Applications: in sandblasting
and in presence of abrasive
substances.

K19 / K16

Protective film in acetate for
full face mask 5000 series
(K19) and 3000 series (K16).
Applications: Industrial
painting and in presence of
chemical splashes.

C10

Textile harness for full face
mask more comfortable
especially with long hair.

C90

Wall mounted container
for full face mask and filters.
